

**We strongly encourage you to read the Technical Leaflet T2, The Net Assembly, which can be found on ITTF.com, at the [Equipment Section](#), before applying for an ITTF Approval.**

**The following steps are then required for applying for an ITTF Approval for a net:**

**1. Please start by:**

- a. Filling in the Net Approval Form, which can be found on ITTF.com.
- b. Preparing a jpg-file with the design of packaging, clearly indicating the ITTF logo.
- c. Preparing a jpg-file with the design of the net itself (net mesh and net post).

**2. When ready, send the above to [equipment@ittf.com](mailto:equipment@ittf.com).**

**3. After all above files are submitted correctly we will send you a confirmation of completing the application, together with the invoice for the testing fee.**

**4. We will send you instructions, upon receiving the payment of the testing fee, with the address to which you should send the net sample.**

The address may defer from time to time, therefore you should wait for our instructions.

**5. Once you receive our instructions you should be ready to ship a complete net set (posts and mesh) to be tested at your own costs.**

At this step you should inform us when you send the samples out, so that we can follow up.

**6. The net(s) will be delivered to one of the ITTF authorised testing laboratories for testing. Results will be available within 3 months.**

**7. We will send to you the results of the net(s) testing as soon as we receive them from the lab(s).**

- If the net(s) fail the tests we will inform you for the procedure of re-testing, in case you wish to repeat the testing for approval.
- If the net(s) pass the tests we will coordinate with you for finalizing the approval.
